DETAILED ACTION

Claims 1-22 are pending as originally filed.

Election/Restrictions

Claims 4-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention/species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/17/06.

Applicant's election with traverse of claims 1-3 in the reply filed on 7/17/06 is acknowledged. The traversal is on the ground(s) that a serious burden does not exist. This is not found persuasive because the claims belong to different, wide, subject matters, such as method of analysis and label displays; such subject matter classified in different classes and sub-classes as shown in the requirement for election/restriction; and the claims contain more than one patentably distinct species.

The requirement is still deemed proper and is therefore made FINAL.

Information Disclosure Statement

Applicant refers to JASO M505-87 in the specification as the standard for measuring water adsorption by Automobile Engineers of Japan. However, this reference was not cited in the IDS submitted on 8/9/04. Applicant is required to submit an English translation of the relevant pages of this reference in an IDS for consideration by the PTO, and to be retained in the application file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Dahlgren et al (US 6,143,058).

Dahlgren teaches a method of measuring water vapor (or steam with air as in applicant's claim 3) adsorption on a porous cell structure (abstract) using a balance and a temperature and humidity controlled chamber – see column 12 lines 1-47. The recitation, “as a standard forcarrying a catalyst component” in the preamble of claim 1 is not a patentable limitation, since it only recites the intended use of the data obtained by the method of analysis. The process described by the reference regards the amount of water sticking to the surface of the pores, etc, of the porous body as the water adsorption of the porous body: the procedure in the reference is identical to the method disclosed by the applicant (paragraph 35 and 36 of the specification).
